

Concerning the National Assoc. of Broadcasters petition 04-160 as it pertains to satellite radio...as a user and purchaser of the satellite services from "XM Radio", I urge you to reject the petition as it is offered by the NAB. I am an over-the-road truck driver of 30-plus years and since January 2004 (when I obtained the services of XM Radio) it has been an invaluable benefit for such travels across this nation's highways in the form of traffic and especially weather related broadcasts. This same information is unpredictable at best using the "local" stations and being from another part of the country, it is impossible to know how to get this kind of info quickly when you need it while keeping your attention focused on the road, safety and traffic around your vehicle. Please do not allow the NAB lobbyists to take away this invaluable resource for our trucking industry in this country...we need this satellite radio and since I am paying for the service, why should the NAB dictate what I can hear and when? Thank you.
